

Mobile Sales Data Analysis – Key Insights

1. Strong Overall Performance

- The total revenue generated stands at **15 million**, indicating a solid overall sales performance.
- A total of **19,000 units** have been sold, showing good product movement and market demand.

2. Sales Trend by Month (Seasonality Insight)

- **July** emerged as the **peak month**, with the highest sales spike — possibly due to mid-year promotions or seasonal demand.
- A noticeable **dip in April and September** may indicate off-season months or reduced marketing efforts.
- The **average monthly sales line** (dotted) provides a useful benchmark, showing that **several months outperformed expectations**, especially July and October.

3. Top-Performing Brands

- **Samsung** leads the market with **25.08%** of total sales, closely followed by **Google** and **OnePlus**, each with over 20% share.
- **Apple** lags behind with just **12.53%**, which may suggest premium pricing or low availability.

4. City-wise Performance

- **Bursa** is the **top-performing city**, followed by **Chennai and Amritsar**, indicating high demand or strong distribution in these regions.
- Cities like **Lahore, Multan, and Islamabad** contributed the least to sales, suggesting opportunities to explore untapped or underperforming markets.

5. Opportunities for Growth

- Boost marketing efforts in **low-sales months** like **April and September** to smoothen the sales curve.
- Investigate the **low performance of Apple** despite its strong global brand — there might be pricing or positioning issues.
- Explore customer acquisition strategies in **lower-performing cities** to balance regional sales.
